

# Welcome to Azure Functions

Azure Functions is a serverless compute service that lets you run event-triggered code without having to explicitly provision or manage infrastructure.

You can use Azure Functions to create PDF files from HTML using PuppeteerSharp, a .NET port of the popular Node.js library Puppeteer.

To learn more about Azure Functions, visit the [official documentation](#).

Here is an example of a simple HTML template that displays a pie chart of the browser market share:

**Browser Market Share in 2023**
